

Texture

in Fashion

Texture

- Texture can draw attention to a design.
- It can increase or decrease the appearance of size.
- Texture is created by the fiber type used, the weaving or knitting process, or by how the fabric is finished.

1. Tactile Texture

- Texture that can be felt by touch.
 - Rough, smooth, soft, fuzzy, bumpy, etc.

2. Visual Texture

- Texture that has been applied to the surface of the fabric to simulate tactile texture.
 - Shiny, dull, matte, patterns, etc.
